NEW! Webnames.ca Domain Name Account Lock Advanced Security for your Domain Name Portfolio

Your domain names encompass your corporate identity, brands, trademarks, products and more. They enable your customers, partners and stakeholders to interact and do business with you online. They are how you get found on the World Wide Web.

Over your organization's lifetime, your domain portfolio will be managed by multiple employees. In addition to following best practices such as safeguarding your password, assigning an in-house domain administrator and maintaining consistent Registrant information, you can now limit access to your domain portfolio by IP Address.

Account Lock

Webnames.ca's **Account Lock** provides enhanced security against domain theft and tampering and protects your business domains from personnel turnover or password leak.

The Account Lock feature allows the Account Owner to restrict access to the account by IP address or IP Address range. If a login attempt is made from an IP address that is not approved, the login will be rejected and an error message returned.

Once the Account Lock feature has been activated by Webnames.ca, the account owner can self manage (add, change and delete) the list of IP address(es) simply by logging into their Webnames.ca account.

Identity Verification for Purchase

For your organization's security, Webnames.ca requires identity authentication for all Account Lock purchases.

Prior to activating the Account Lock feature, an Authorization Form with photo identification must be completed by the Account Owner. After the Authorization Form is reviewed and verified, a Webnames.ca representative will activate Account Lock on the specified account.

Pricing and Activation

Account Lock is **CAD \$250.00/year** per account.

To purchase Account Lock, contact your Webnames.ca Corporate Services Representative. You may also call toll-free 1-866-470-6820 or email corporate@webnames.ca for more information.
