

Show visitors your website is secure

Give your customers the assurance they need to conduct business on your website - ensure that credit card transactions, consumer data, login details, communications and applications are secure.

What is SSL?

'Secure Socket Layer' protocol employs a cryptographic system of public and private keys to secure communications and provide authentication over the Internet.

SSL encrypts the link between your website and a visitor's browser so the data passing between them stays private and secure.

Why GeoTrust?

GeoTrust is a world leader in SSL Protection and one of the most trusted brands in Internet security. A GeoTrust site seal lets customers know your website has been secured by a global Certificate Authority for secure e-business transactions.

When Do I need SSL?

You require SSL if you:

- Accept orders & credit card details online
- Comply with privacy & security requirements
- Collect sensitive data (addresses, birthdates, ID numbers) or require login
- Share confidential information across multiple locations or offices on the same Intranet

Customer Feedback

We have purchased several SSL certificates from Webnames.ca. Their customer support was exceptional throughout the entire process. They answered all our questions, making the purchase and configuration process painless.
